

Check DASH version and update it if necessary

Reason:

Some vehicles may occasionally experience a delay when starting the system. In such cases, please ensure the dashboard is updated to the latest version before delivery to the customer.

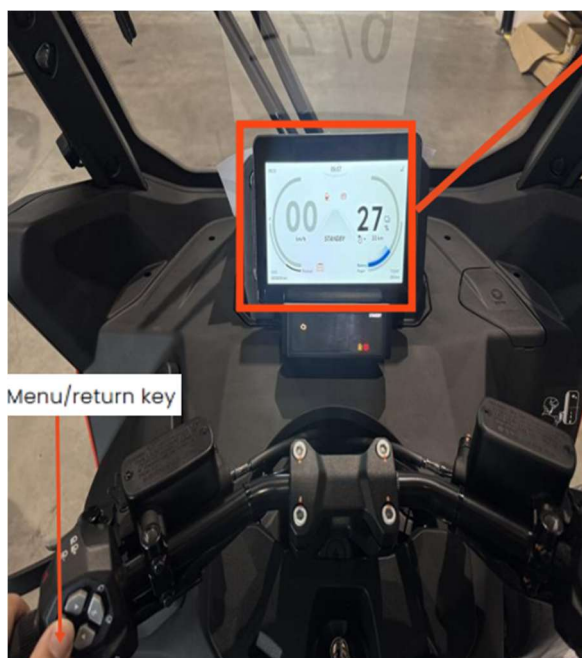

Preparation:

1. USB flash drive with type-C connector

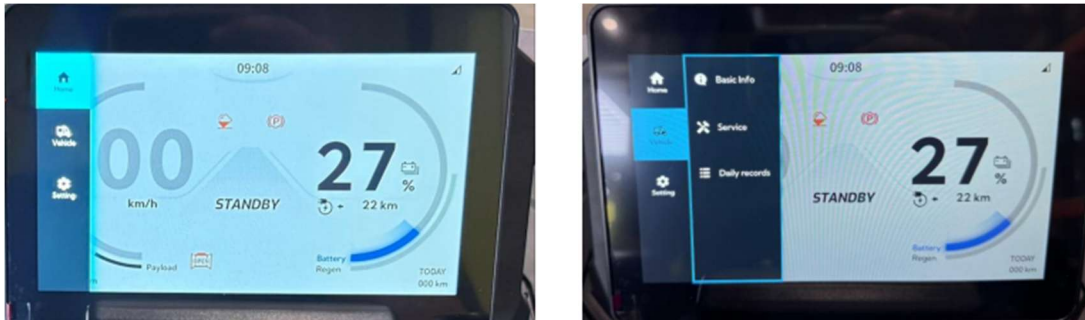

Step:

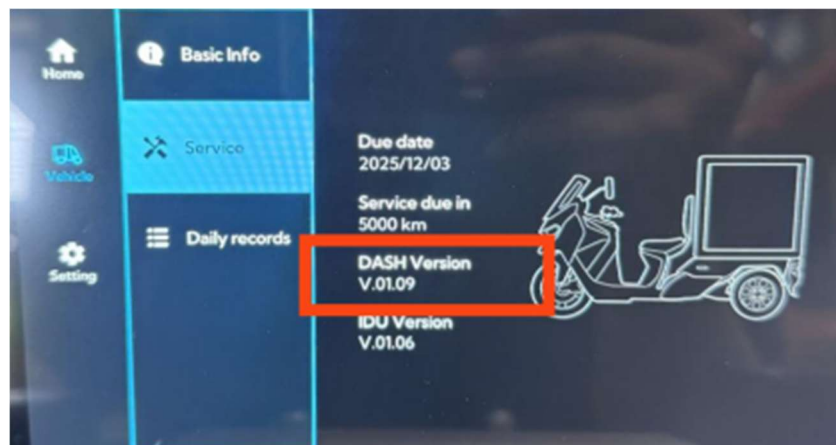

1. Power on the vehicle.
2. Press the “**Menu**” button on the let-hand grip.

3. Select “**Vehicle**” on DASH and then choose “**Service**” page.

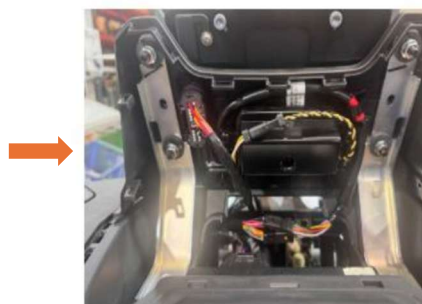

4. Verify the DASH version. The version of DASH should be V01.09 and end of campaign. But it is not V01.09 or below version, please proceed **Step5** to update the DASH.

5. Unzip the file and transfer to the flash.
6. Please remove the DASH back cover and directly disconnect the DASH cable to cut off the power.

Back view of DASH

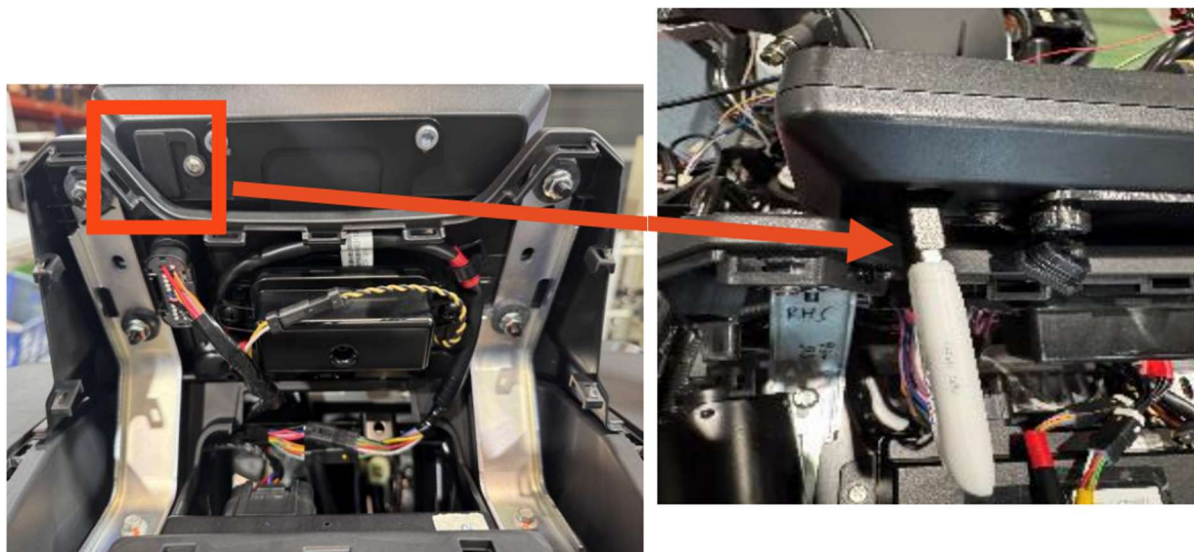

Remove the cover of DASH.

Disconnect the DASH
power cable.

7. Insert the USB flash drive into the USB port at the back of the Dash.

8. Please reconnect the DASH cable and start the vehicle. The Dash will display the screen shown in the image. Wait for the update to be completed, and the Dash will automatically restart.

9. Check the version of DASH again.
